

**Buffalo Trace
Experimental Collection
Extended Stave Drying
Time**

45%

Richer and fuller when compared to the Standard Stave Drying Time variant in this Experimental Collection. Sweeter too, with creamy layers of vanilla and caramel. The extended drying time influence tames the dried spice and oak resin and is proof that extended stave aging really benefits older bourbons that might otherwise be dominated by oak.

Sadly, with whiskey in such demand, I doubt many bourbon producers will take the time to age the staves longer. Price per 375 ml.
